Your body in balance!

BIO-IDENTICALS—It’s nothing new to us!

It’s been in the news lately. Oprah, Dr. Phil and his wife, Robin McGraw, have brought the term “bio-identicals” into the national spotlight. However, compounding bio-identical hormones are certainly not new to the Custom Compounding Center. We have been compounding bio-identical hormones for men and women for 7 years. We have strict quality control standards and when our compounded hormones are tested by the State Board of Pharmacy we have passed all analytical testing with flying colors. You can be confident that when your prescriber writes a prescription for bio-identical hormone replacement, your prescription will contain EXACTLY what was prescribed!

How it works...

For those women and men interested in starting on bio-identical hormones, we recommend you begin with your physician. If your physician or nurse practitioner is not familiar with prescribing bio-identical hormones, we can recommend prescribers who are. Sonja O’Bryan, the compounding pharmacist at The Custom Compounding Center, is also available for private consultations. She can work closely with your prescriber to find the dose that will work best for you. The cost for a 15-20 minute consultation with Dr. O’Bryan is \$25. During the consultation, she will discuss your symptoms with you and the correlating possible deficiencies in hormones. All compounded medicine requires a valid prescription from your doctor.

Dr. O’Bryan

What’s saliva got to do with it?

The Custom Compounding Center recommends saliva testing to determine each patient’s hormone profile. Saliva testing measures the actual available hormones that are in your tissues.

Your saliva is sent off to a lab which posts the results to our private web portal. For a good assessment, the cost for a saliva

test can range from \$90-\$150. The saliva test kits are stocked at The Custom Compounding Center. It normally takes around 2 weeks to receive your results. We can also work with patients and physicians to individualize dosing for serum values (blood levels of hormones.) Once we have your lab results, we work with your physician to determine a dose and formulation for you. Remember, every patient is different. That’s what makes the bio-identical hormones so great. It’s completely customized to your body’s own needs!

“When you get your hormones balanced by taking bio-identical hormones, eating right and exercising, you will achieve your ideal body composition”
